WHERE HAVE ALL PLANNED PARENTHOOD'S CLIENTS GONE?

We looked at Planned Parenthood of Indiana's publicly-available, fiscal year data for the last 10 years. Despite Indiana adding Kentucky to its Planned Parenthood empire in 2013, procedures at the abortion giant are way down in every category except one.

**PATIENTS**
From 2007 to 2016, visits are down:

- Total Visits are down by 180,000 visits
- In 2007, Planned Parenthood of Indiana saw 97,900 unduplicated patients. In 2016, that number dropped 48% to 51,100 in both Indiana AND Kentucky
- Percentage of Indiana and Kentucky's populations seen by Planned Parenthood: 0.005%

**PROCEDURES**
From 2007 to 2016, procedures are down:

- Pap tests -90%
- Pregnancy tests -55%
- Chlamydia tests -40%
- Gonorrhea tests -41%
- HIV tests -14%
- Colposcopies -81%

**CONTRACEPTIVES**
From 2007 to 2016, Planned Parenthood is distributing LESS:

- Oral contraception -71%
- Emergency contraception -86%
- Condoms/Spermicides -62%

**ABORTIONS**
From 2007 to 2016, Planned Parenthood managed to increase abortions in the Hoosier state by 5%, even while abortions are on the decline on the state and national levels

While every other procedure declined during the last decade, Planned Parenthood of Indiana and Kentucky continued to convince women to end their pregnancies.

PROCEDURES ARE DOWN...EXCEPT FOR ABORTION. WHY DOES PLANNED PARENTHOOD DESERVE TAXPAYER FUNDING?
